

Global Diagram 24. Today's resources for world mission: churches, workers, institutions, agencies, media, literature, radio/TV, money, computers, networks, plans.

This table enumerates below the entire extent of global Christian resources of all kinds. Several of these are then shown at lower right as they are utilized today, divided among the 3 worlds, A, B, and C. These should be added to the other resources shown, similarly divided, in the other global diagrams.

Our final fully-developed logo for this series (shown on Global Diagram 44) shows the many rivers of these resources (4,000 Great Commission networks) streaming across the Earth as a de facto, single, global evangelization movement.

The present situation is however that the vast bulk of these resources benefit only the Christian world. Even in foreign missions, 85% of personnel and money are devoted to Christian lands, such as missionaries from USA to Brazil or Kenya or the Philippines (see inner ellipse in globe at bottom).

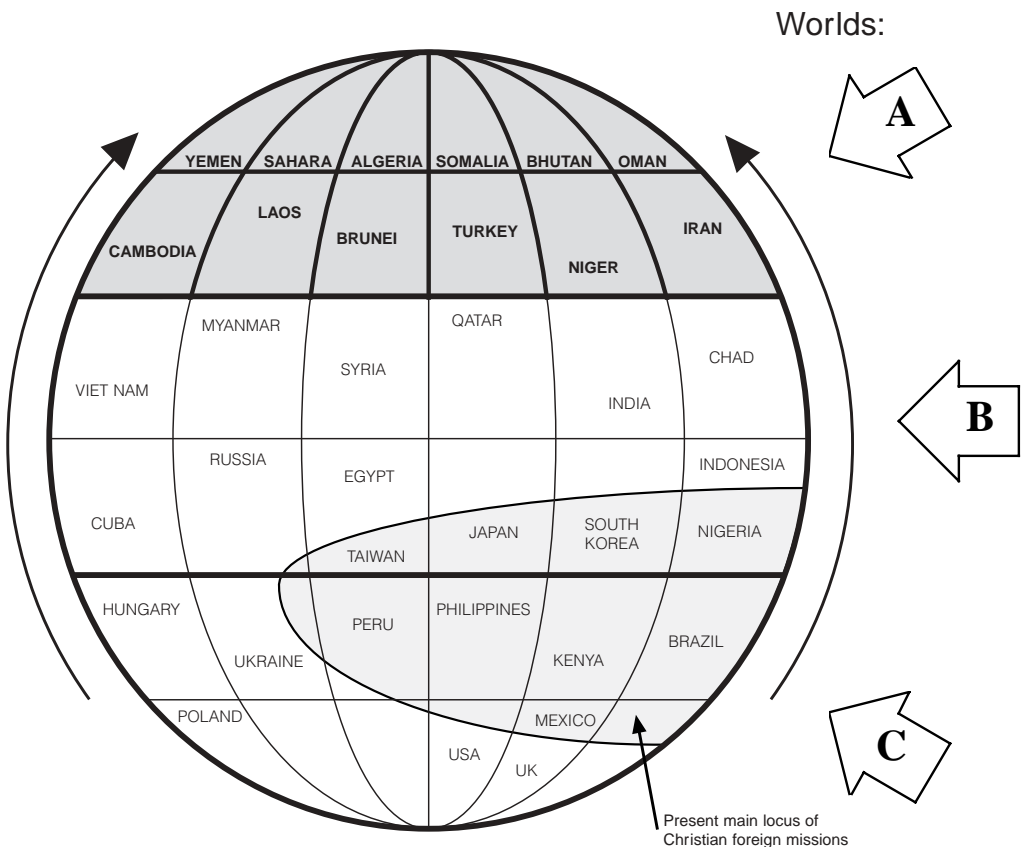

It is obvious that all segments of the Earth have a right to their fair share of resources of all kinds. The least that Christians can do is to ensure that the resources which are under their own direct control—the spiritual resources catalogued below—get properly shared with all. To redress the

present situation Christians will need to concentrate on World A far more, hence it is shown shaded gray and its segments are shown in bold on the large globe at lower left. The faint lines of the other 2 Worlds B and C suggest the far less significant share of global resources that these worlds should now be deliberately restricted to. The 2 long thin arrows on either side rising upward then show the new directions in which these ample resources need to be redirected or redeployed.
